

Drawing & Stamping Fluids

STRAIGHT OILS, SOLUBLE OILS & SYNTHETICS

Brighton Laboratories formulates premium drawing and stamping compounds for manufacturers that produce high quality stamping solutions.

Brighton Labs drawing and stamping compounds are formulated for a broad range of materials including high-strength steel, aluminum, stainless steel, galvanele, and other ferrous and non-ferrous metals typically used in heavy duty stamping and deep draw applications.

Our in-house Technical Services Department is available 24/7 to help with any issues you may have. In addition, a routine fluid analysis program can be created to ensure your fluids are always running at peak performance. On-site training is available to help your team better manage your fluids resulting in lower costs.

Applications

- Forming
- Progressive Stamping
- Piercing
- Hydroforming
- Drawing
- Bending
- Coining
- Blanking

Brighton Laboratories

- Serving the metalworking industry for over 25 years
- Experienced technical support to solve the most complex problems
- Custom formulated products manufactured for the toughest metalworking operations
- Designed to meet or exceed industry standards and specifications
- ISO 9001:2008 Certification

Features and Benefits

- Chlorine and sulfur free formulations available
- Low odor
- Low smoking
- Environmentally friendly
 - Compatible with current waste-treatment processes
 - Biodegradable formulations available
 - Non-toxic
 - Low misting
 - Non-hazardous
- Viscosity ranges from low to high depending on your specifications
- Enhanced lubricity to increase die life and decrease part defects
- Corrosion protection
 - Protects ferrous and non-ferrous metals
 - Eliminates rust and corrosion issues
- Stable and long lasting formulations
- Reliable performance even under harsh conditions
- Consistent film forming
- Residual films easily removed with compatible Brighton Labs parts wash cleaners
- Vanishing oil formulations available
- On-site recyclable fluids available
